

Latest technology pampers your cigars

High-Tech Humidity Sensor

High-Tech Humidity Sensor measures the humidity level accurately to +/- 2%

Button for adjustment

choose your own humidity level between 65% and 75%

Second High-tech Sensor

this unique sensor ensures accuracy and safety

Refill neck

easy refilling with distilled water

Water Container

230 cm³ of water are stored and are good for appr. 4 months of operation

Evaporation unit

the carefully selected materials guarantee fast evaporation

Battery Compartment

4 AA mignon cells power the unit for over a year

Electronic

a microprocessor controls and adjusts perfectly the individually chosen humidity level

Mini-pump

supplying the evaporation unit most accurately with the right amount of water

Weight: 330g **Dimensions:** 6 cm x 6,7 cm x 17 cm

Choose the level of satisfaction

Average humidity level over the past 3 days

wanted level of humidity

current level of humidity

temperature

Indication "battery low"

Indication "water low"

No more uncertainty!

from Kurt Steinborn

How will my cigar be? Hopefully be perfect! Or too dry? Or too wet? In the past this question could only be answered after the cigar was taken out of the humidor. For the past 5 years a team of scientists in the fields of physics, electronics and materials science under the leadership of Prof. Dr. F. Lange have researched, developed and – with the gained knowledge – created CigarSpa!

From now on you can be sure – even before you have opened the humidor.

"sanus per aquam" this knowledge dates back to old Roman days

When we say "Spa" today we know that water can create wellness. This also applies to cigars. With this in mind we named our invention "CigarSpa - wellness for cigars". Your cigars will enjoy the CigarSpa - climate – and you will enjoy cigars which are perfectly conditioned by the latest technology.
